

Year 2

Examples of different food chains

The image displays three distinct food chains, each represented by a horizontal sequence of organisms connected by red arrows indicating the direction of energy flow. The first chain starts with a green plant (producer), followed by a snail (primary consumer), a fish (secondary consumer), and a white egret (tertiary consumer). The second chain begins with a small green plant (producer), followed by a green beetle (primary consumer), a yellow frog (secondary consumer), and a brown hawk (tertiary consumer). The third chain starts with a bundle of wheat (producer), followed by a brown mouse (primary consumer), and a yellow and black striped snake (secondary consumer). In the bottom right corner, there is a small graphic of a magnifying glass with a green plant inside it, symbolizing environmental study or biology.
